Event Management System — Test Cases (6 per Functional Requirement)

FR-001 — Account Registration & Email Verification

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	User Registration	Verify account is created with valid signup details.	User is on the Sign Up page.	1: Enter name, email, password. 2: Click Sign Up.	Name: Amit Rao; Email: amit.rao@test.com; Password: Pass@123	Account is created and shown as 'pending verification'; login is blocked until verified.	201 Created, verified=false (pending).	Pass
UT_02	User Registration	Verify signup is rejected for an invalid email format.	User is on the Sign Up page.	1: Enter name, password. 2: Enter malformed email. 3: Click Sign Up.	Name: Amit Rao; Email: amitrao@@test; Password: Pass@123	Signup is rejected with an 'invalid email format' error; no account is created.	400 invalid email error; no account created.	Pass
IT_01	Email Verification	Verify clicking the emailed verification link activates the account.	A pending account exists with a verification email sent.	1: Open verification email. 2: Click verification link. 3: Attempt login.	Verification link for amit.rao@test.com	Account status changes to 'active'; login succeeds immediately after verification.	Token consumed once, user.verified set true; subsequent login succeeds (code trace: lib/tokens.ts consumeVerificationToken + /api/auth/verify).	Pass
IT_02	Email Verification	Verify an expired/invalid verification link is rejected.	A verification link older than the configured expiry exists.	1: Click the expired verification link.	Expired verification link (>24h old)	System displays 'link expired/invalid' message; account remains inactive.	400 'This verification link has expired.'; 24h TTL confirmed in lib/tokens.ts (TOKEN_TTL_MS).	Pass
ST_01	Registration Flow	Verify end-to-end signup, verification, and first login.	None.	1: Sign up with valid details. 2: Open email, click verification link. 3: Log in with the same credentials.	Name: Priya Nair; Email: priya.nair@test.com; Password: Nair@456	User completes signup, is verified, and logs in successfully with dashboard displayed.	Signup -> verify -> login chain confirmed by code trace across the three routes; not run as a live browser session in this pass.	Pass
ST_02	Registration Flow	Verify signup is rejected when the email is already registered.	An active account already exists for the given email.	1: Enter name/password. 2: Enter an already-registered email. 3: Click Sign Up.	Email: amit.rao@test.com (existing)	Signup is rejected with 'email already registered' error; no duplicate account is created.	409 duplicate email error; no new row created.	Pass

FR-002 — Login & Password Reset

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Login	Verify login succeeds with correct credentials.	A verified, active account exists.	1: Enter email and password. 2: Click Login.	Email: amit.rao@test.com; Password: Pass@123	User is logged in and redirected to the dashboard within 5 seconds.	200 OK, Set-Cookie session issued, user payload returned.	Pass
UT_02	Login	Verify login is rejected with an incorrect password.	A verified, active account exists.	1: Enter correct email. 2: Enter wrong password. 3: Click Login.	Email: amit.rao@test.com; Password: WrongPass1	Login is rejected with an 'invalid credentials' error; no session is created.	401 'Invalid email or password'; no Set-Cookie header (same message used for unknown-email case, no account-existence oracle).	Pass
IT_01	Password Reset	Verify 'Forgot Password' sends a reset email with a valid link.	Account exists with a registered email.	1: Click 'Forgot Password'. 2: Enter registered email. 3: Submit.	Email: amit.rao@test.com	A time-limited password-reset email is sent to the registered address.	200 generic message for both existing/non-existing email (anti-enumeration); reset token created with 1h TTL for existing accounts.	Pass

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
IT_02	Password Reset	Verify the reset link updates the password and invalidates the old one.	A valid, unexpired reset link exists.	1: Open reset link. 2: Enter new password. 3: Submit. 4: Log in with old password.	New Password: NewPass@789	Password is updated; login with the old password fails; login with the new password succeeds.	200 'status: success'; token single-use (consumePasswordResetToken), old hash overwritten.	Pass
ST_01	Password Reset Flow	Verify complete forgot-password-to-login journey.	None.	1: Request reset. 2: Open email, click link. 3: Set new password. 4: Log in with new password.	Email: priya.nair@test.com; New Password: Nair@789	User successfully logs in using the newly set password.	Chain confirmed by code trace across forgot-password / reset-password / login routes; not run as a live browser session in this pass.	Pass
ST_02	Password Reset	Verify an expired reset link is rejected.	A reset link older than its expiry window exists.	1: Click the expired reset link. 2: Attempt to set a new password.	Expired reset link (>1h old)	System displays 'link expired' message; password is not changed.	400 'This password reset link has expired.'; 1h TTL confirmed in lib/tokens.ts (RESET_TOKEN_TTL_MS).	Pass

FR-003 — RBAC, Profile Updates & Admin Account Management

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Access Control	Verify a Participant cannot access the Organizer 'Create Event' page.	Logged in as a Participant.	1: Navigate directly to the Create Event URL/page.	Role: Participant	Access is denied with an authorization error; page content is not shown.	403 'Access denied: Only organizers can create events' from POST /api/events (requireOrganizer gate).	Pass
UT_02	Profile Management	Verify a user can update their profile information.	User is logged in.	1: Go to Profile. 2: Edit contact number. 3: Save.	New Contact: 9876543210	Profile is updated and the new contact number is displayed on next view.	FAIL as written: the User model (prisma/schema.prisma) has no contact-number field, and PATCH /api/auth/me only accepts/updates 'name'. There is no contact-number field to edit anywhere in the app.	Fail
IT_01	Admin Account Management	Verify admin suspending a user blocks that user's login.	Admin is logged in; target user account is active.	1: Admin opens user management. 2: Select target user. 3: Click Suspend.	Target user: amit.rao@test.com	User status changes to 'suspended'; subsequent login attempt by that user is blocked.	200, user.suspended=true (PATCH /api/admin/users/[id]); next login attempt returns 403 'account has been suspended'.	Pass
IT_02	Admin Account Management	Verify admin deleting a user account removes login access.	Admin is logged in; target user account exists.	1: Admin opens user management. 2: Select target user. 3: Click Delete. 4: Confirm.	Target user: priya.nair@test.com	Account is removed; login attempt with deleted credentials fails.	204 on DELETE (user row removed, FK-guarded: blocked with 409 instead if the user still organizes events).	Pass
ST_01	Role-Based Navigation	Verify each role sees only its permitted menu items end-to-end.	Three accounts exist: one per role (Participant, Organizer, Admin).	1: Log in as Participant, note menu. 2: Log out, log in as Organizer, note menu. 3: Log out, log in as Admin, note menu.	Participant, Organizer, Admin credentials	Each role's menu shows only its permitted actions (e.g., only Admin sees 'Manage Users').	Not Executed — requires a manual 3-account UI walkthrough; not run in this pass. (Server-side routes are role-gated per-endpoint; no dedicated role-conditional nav component was found to verify independently.)	Not Executed

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
ST_02	Admin Account Management	Verify a suspended user sees a clear error when attempting to log in.	Target account has been suspended by admin.	1: Attempt login with suspended account's credentials.	Suspended user: amit.rao@test.com	Login is rejected with an 'account suspended' message; no session/dashboard is shown.	403 'This account has been suspended'; no Set-Cookie header.	Pass

FR-004 — Event Creation & Update

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Event Creation	Verify an event is created when all required fields are valid.	Organizer is logged in.	1: Go to Create Event. 2: Fill name, description, date, time, venue, category, capacity. 3: Submit.	Name: Tech Fest; Date: 2026-10-10; Capacity: 100	Event is created and appears in the organizer's event list with all fields correct.	201 Created; event returned with all submitted fields and appears via GET /api/events?organizer=me.	Pass
UT_02	Event Creation	Verify event creation fails when a required field is missing.	Organizer is logged in.	1: Go to Create Event. 2: Leave 'capacity' blank. 3: Submit.	Name: Tech Fest; Capacity: (blank)	Submission is rejected with a 'required field missing' error; no event is created.	400 'Required field missing: capacity' (Zod createEventSchema); no row created.	Pass
IT_01	Event Update	Verify updating event details saves and reflects on the listing page.	An event created by the organizer exists.	1: Open the event. 2: Edit venue. 3: Save. 4: View event list.	New Venue: Auditorium B	Updated venue is saved and displayed immediately on the public event listing.	FAIL — app/api/events/[id]/route.ts on current main exports only GET/PATCH/DELETE, no PUT handler (405). FR-004b (organizer event editing) was merged via PR #46, then reverted via PR #52 ('Revert #46 (FR-004b event editing, merged before review)') on 2026-10-31 and has not been re-merged.	Fail
IT_02	Event Creation	Verify the capacity field only accepts a positive integer.	Organizer is on the Create Event form.	1: Enter capacity as -5. 2: Submit.	Capacity: -5	Submission is rejected with an 'invalid capacity' error; no event is created.	400 'Invalid capacity: capacity must be a positive integer' (lib/validation.ts).	Pass
ST_01	Event Lifecycle	Verify an organizer can create then edit an event, with changes visible to participants end-to-end.	Organizer is logged in; Participant account exists separately.	1: Organizer creates event. 2: Organizer edits date. 3: Participant views event listing.	Name: Workshop A; New Date: 2026-11-01	Participant sees the updated date on the event listing without any stale data.	FAIL — blocked by the same reverted edit endpoint as IT_01; there is no way to change an event's date post-creation on current main.	Fail
ST_02	Access Control	Verify a Participant cannot create an event via direct page access.	Logged in as Participant.	1: Navigate to the Create Event page URL directly.	Role: Participant	Access is denied; Participant is redirected or shown an authorization error.	403 'Access denied: Only organizers can create events' (same requireOrganizer gate as FR-003/UT_01).	Pass

FR-005 — Event Cancellation & Update Notifications

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Event Cancellation	Verify cancelling an event marks its status as cancelled.	An active event created by the organizer exists.	1: Open the event. 2: Click Cancel. 3: Confirm.	Event: Tech Fest	Event status changes to 'cancelled' and is flagged as such in the event list.	PATCH {action:'cancel'} -> 200, status='CANCELLED'.	Pass

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_02	Event Cancellation	Verify a cancelled event rejects new registration attempts.	The target event has been cancelled.	1: Participant opens the cancelled event. 2: Click Register.	Event: Tech Fest (cancelled)	Registration is rejected with an 'event cancelled' message.	400 'event cancelled'. Automated test passes: 'POST /api/events/[id]/register returns 400 when event is cancelled'.	Pass
IT_01	Notifications	Verify cancelling an event triggers a notification to all registrants.	At least 2 participants are registered for the event.	1: Organizer cancels the event. 2: Check notification queue/log for each registrant.	Registrants: 2 participants	A cancellation notification is dispatched to every registered participant within 5 minutes.	FAIL — the current PATCH cancel handler (app/api/events/[id]/route.ts on main) makes no sendMail/notification call at all; nothing is dispatched to any registrant. FR-005b notifications (PR #47) remain open, stacked on the now-reverted FR-004b branch, and are not on main.	Fail
IT_02	Notifications	Verify the cancellation notification content includes correct event details.	Event cancellation notification has been sent.	1: Open the received notification email.	Event: Tech Fest; Date: 2026-10-10	Email content correctly names the event and states it has been cancelled.	Blocked — no notification is ever sent on current main (see IT_01), so there is no content to inspect.	Fail
ST_01	End-to-End Cancellation	Verify a registered participant receives the cancellation email within the defined window.	Participant is registered for an active event.	1: Organizer cancels the event. 2: Participant checks inbox within 5 minutes.	Event: Workshop A	Participant's inbox contains the cancellation email within 5 minutes of cancellation.	Blocked — same root cause as IT_01; the participant's inbox receives nothing on cancellation today.	Fail
ST_02	Event Cancellation	Verify cancelling an event with zero registrants completes without error.	Event exists with no registrations.	1: Organizer opens the event. 2: Click Cancel. 3: Confirm.	Event: Empty Seminar (0 registrants)	Event is cancelled successfully with no errors and no notifications sent.	200, cancellation succeeds. Note: 'no notifications sent' currently holds for every cancellation, not just the zero-registrant case, since the notify step doesn't exist yet on main (see IT_01).	Pass

FR-006 — Event Discovery, Search, Filtering & Category Management

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Event Search	Verify searching by exact event name returns the matching event.	At least one event named 'Tech Fest' exists.	1: Enter 'Tech Fest' in the search bar. 2: Submit search.	Search term: Tech Fest	Search results contain the 'Tech Fest' event and no unrelated events.	Client-side filteredEvents() in app/events/page.tsx matches by substring on name; 'Tech Fest' returns the expected event.	Pass

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_02	Event Filtering	Verify filtering by category returns only matching events.	Events exist across multiple categories (e.g., Tech, Music).	1: Select category filter 'Music'. 2: Apply filter.	Category: Music	Only events tagged 'Music' are shown in the results.	FAIL — there is no dedicated category filter control. The single search box matches a substring across name/category/venue/description together, so a search for 'Music' can both miss a Music-category event with no 'Music' text in its name/venue/description, and wrongly include a non-Music event whose name/description happens to contain the word.	Fail
IT_01	Category Management	Verify an admin-added category appears in the organizer's event creation form.	Admin is logged in.	1: Admin adds category 'Workshops'. 2: Organizer opens Create Event form.	New category: Workshops	'Workshops' appears as a selectable category on the Create Event form.	FAIL — no admin category-management endpoint exists on main; /api/categories only exposes GET (read-only). Categories are only ever created implicitly, as a side effect of an organizer creating an event with a new category string.	Fail
IT_02	Event Filtering	Verify filtering by a date range returns only events within that range.	Events exist with varying dates.	1: Set date filter from 2026-10-01 to 2026-10-15. 2: Apply filter.	Date range: 2026-10-01 to 2026-10-15	Only events falling within the specified date range are displayed.	FAIL — no date-range filtering UI or query support exists anywhere in the app (GET /api/events only supports 'organizer' and 'active' query params).	Fail
ST_01	Combined Search & Filter	Verify combined name search with category and date filters returns the correct intersection.	Multiple events exist with overlapping and non-overlapping attributes.	1: Enter search term. 2: Apply category filter. 3: Apply date filter. 4: Submit.	Search: Fest; Category: Tech; Date: Oct 2026	Only events matching all three criteria simultaneously are returned.	FAIL — blocked by the missing category and date filters above; only the single free-text search exists.	Fail
ST_02	Event Listing	Verify cancelled events are excluded from listing and search results.	At least one cancelled event exists among active events.	1: View the event list. 2: Search for the cancelled event's name.	Cancelled event: Old Meetup	Cancelled event does not appear in the general listing or in search results.	Pass — the public listing fetches GET /api/events?active=true, which excludes CANCELLED events server-side; the client-side search only ever filters within that already-excluded set.	Pass

FR-007 — Event Registration & Duplicate Prevention

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Event Registration	Verify a valid registration creates a record with correct user, event, timestamp, and status.	Participant is logged in; event has available seats.	1: Open event. 2: Click Register. 3: Confirm.	Event: Tech Fest; User: amit.rao@test.com	A registration record is created with correct user, event, timestamp, and status 'confirmed'.	Automated test passes: 'FR-007 / UT_01: Verify a valid registration creates a record with correct user, event, timestamp, and status' (tests/registration.test.ts).	Pass

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_02	Duplicate Prevention	Verify a duplicate registration by the same user for the same event is rejected.	User is already registered for the event.	1: Open the same event again. 2: Click Register.	Event: Tech Fest; User: amit.rao@test.com (already registered)	Registration is rejected with an 'already registered' message; no duplicate record is created.	Automated test passes: 'FR-007 / UT_02: Verify duplicate registration by the same user for the same event is rejected' + 'API: ... returns 409 when user is already registered'.	Pass
IT_01	Seat Management	Verify a successful registration decrements the event's seat count in the database.	Event has N available seats before registration.	1: Note seat count. 2: Register for the event. 3: Recheck seat count.	Event: Workshop A; Seats before: 20	Seat count is exactly N-1 after the registration commits.	Covered by the passing FR-008 capacity-check tests (getEventCapacity helper, UT_01/UT_02) which assert exact post-registration seat counts.	Pass
IT_02	Organizer Reporting	Verify a new registration is retrievable in the organizer's registrant list.	Organizer owns the event that was just registered for.	1: Participant registers. 2: Organizer opens 'View Registrants'.	Event: Tech Fest	The newly registered participant appears in the organizer's registrant list.	Automated test passes: 'API: GET /api/registrations?eventId=... returns live database capacity totals for owner'.	Pass
ST_01	End-to-End Registration	Verify a participant registers, sees confirmation, and appears in the organizer's list.	Participant and organizer accounts exist; event has open seats.	1: Participant registers for the event. 2: Participant sees confirmation screen. 3: Organizer views registrants.	Event: Tech Fest; User: priya.nair@test.com	Confirmation is shown to the participant and their entry appears in the organizer's registrant list.	Covered end-to-end by the passing register + registrations-list API tests (tests/api-routes.test.ts).	Pass
ST_02	Registration Validation	Verify registering for a cancelled or non-existent event is rejected.	Target event is cancelled or its ID no longer exists.	1: Attempt to register via the cancelled event's page/ID.	Event: Old Meetup (cancelled)	Registration is rejected with an appropriate error; no record is created.	Automated tests pass: 'FR-007 / ST_02: Verify registering for a cancelled event is rejected' and '... for a non-existent event is rejected'.	Pass

FR-008 — Seat Capacity Check & Concurrency Control

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Capacity Check	Verify registration is rejected when the event has zero available seats.	Event capacity is fully consumed (0 seats left).	1: Open the full event. 2: Click Register.	Event: Full Seminar (0 seats left)	Registration is rejected with an 'event full' message; seat count remains 0.	Automated test passes: 'FR-008 / UT_01' (tests/registration.test.ts).	Pass
UT_02	Capacity Check	Verify registration succeeds and decrements the seat count when a seat is available.	Event has exactly 1 seat remaining.	1: Register for the event.	Event: Almost Full Talk (1 seat left)	Registration succeeds; seat count becomes 0 immediately after.	Automated test passes: 'FR-008 / UT_02'.	Pass
IT_01	Concurrency Control	Verify only one of two simultaneous requests for the last seat is confirmed.	Event has exactly 1 seat remaining.	1: Fire two registration requests for the same event at the same time (different users). 2: Check results.	Event: Almost Full Talk (1 seat left); Users: A, B	Exactly one request is confirmed; the other is rejected as 'event full'.	Automated test passes: 'FR-008 / IT_01' — SERIALIZABLE transaction + retry in lib/registration.ts, run against a real Postgres instance (required for this case per CI config).	Pass
IT_02	Concurrency Control	Verify seat capacity never goes negative under a simulated race condition.	Event has exactly 1 seat remaining.	1: Fire 10 simultaneous registration requests for the same event. 2: Check final seat count.	Event: Almost Full Talk (1 seat left); 10 concurrent requests	Final seat count is 0, never negative; exactly one registration is confirmed.	Automated test passes: 'FR-008 / IT_02'.	Pass

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
ST_01	Load Test — Concurrency	Verify 100 concurrent requests for a 1-seat event yield exactly one confirmation.	Event has exactly 1 seat remaining; load-testing tool configured.	1: Fire 100 concurrent registration requests. 2: Count confirmations and rejections.	Event: Final Seat Test; 100 concurrent users	Exactly 1 confirmation and 99 rejections/waitlist offers are recorded; no overbooking occurs.	Automated test passes: 'FR-008 / ST_01: Load Test / Concurrency — ... 100 concurrent requests ... yield exactly one confirmation' (run against real Postgres).	Pass
ST_02	End-to-End Full Event	Verify a new participant sees 'Full' and is blocked from registering for a full event.	Event has 0 seats remaining.	1: Participant opens the full event page.	Event: Full Seminar (0 seats)	Page displays 'Event Full' and the Register button is disabled or leads to a waitlist offer.	Automated test passes: 'API: POST /api/events/[id]/register returns 400 when event is full'; UI disables/offers-waitlist on the same signal.	Pass

FR-009 — Waitlist, Self-Cancellation & Notifications

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Waitlist	Verify joining a waitlist records the user's position for a full event.	Event is full (0 seats); participant is not yet registered or waitlisted.	1: Open the full event. 2: Click 'Join Waitlist'.	Event: Full Seminar; User: amit.rao@test.com	User is added to the waitlist and shown their queue position (e.g., position 1).	Automated test passes: 'FR-009a / UT_01: Verify joining a waitlist records the user's position for a full event'.	Pass
UT_02	Self-Cancellation	Verify a participant can cancel their own registration, freeing the seat.	Participant has an active registration for the event.	1: Open 'My Registrations'. 2: Click Cancel for the event. 3: Confirm.	Event: Tech Fest; User: priya.nair@test.com	Registration status changes to 'cancelled' and the event's seat count increases by 1.	Automated test passes: 'FR-009b / UT_02: Self-cancellation updates status to cancelled, increments seat count immediately, and dispatches cancellation email'.	Pass
IT_01	Waitlist Auto-Promotion	Verify a cancellation automatically promotes the first waitlisted user.	Event is full; at least one user is on the waitlist; a registered participant cancels.	1: Registered participant cancels. 2: Check the waitlisted user's registration status.	Waitlist position 1: amit.rao@test.com	First waitlisted user's status changes to 'confirmed' and they receive a notification.	Automated test passes: 'FR-009a / IT_01: Verify a cancellation automatically promotes the first waitlisted user'.	Pass
IT_02	Notifications	Verify a confirmation email is sent immediately after a successful registration.	Participant successfully registers for an event with open seats.	1: Register for the event. 2: Check the participant's inbox.	Event: Workshop A; User: priya.nair@test.com	A registration confirmation email is received within 5 minutes.	Automated test passes: 'FR-009b / IT_02: Successful registration with open seats sends confirmation email immediately'.	Pass
ST_01	End-to-End Waitlist Flow	Verify a waitlisted user is auto-promoted and notified when a seat frees up.	Event is full; Participant X is on the waitlist; Participant Y is registered.	1: Participant X joins waitlist (event full). 2: Participant Y cancels registration. 3: Check Participant X's status and inbox.	Waitlisted: Participant X; Cancelling: Participant Y	Participant X's status becomes 'confirmed' and they receive a promotion notification.	Automated test passes: 'FR-009a / ST_01: End-to-End Waitlist Flow ...'.	Pass
ST_02	Reminder Notifications	Verify a reminder notification is sent to registered participants before the event date.	Participant is registered for an event starting within the reminder window.	1: Advance/trigger the scheduled reminder job for an event starting in 24 hours. 2: Check participant's inbox.	Event date: T+24h; Reminder window: 24h	Participant receives a reminder email referencing the correct event and time.	Automated test passes: 'FR-009b / ST_02: Scheduled reminder job sends reminder notification to confirmed participants for events starting within 24h'.	Pass

FR-010 — Reporting, Export & Platform Statistics

Test Case ID	Name of Module	Test Case Description	Pre-conditions	Test Steps	Test Data	Expected Results	Actual Result	Test Result
UT_01	Reporting	Verify the displayed registered-participant count matches actual active registrations.	Event has a known number of active registrations (e.g., 15).	1: Open the event page. 2: Check the displayed participant count.	Event: Tech Fest; Active registrations: 15	Displayed count reads exactly 15, matching the database.	Automated test passes: 'FR-010a / UT_01'.	Pass
UT_02	Reporting	Verify the displayed available-seat count equals capacity minus active registrations.	Event capacity is 100 with 15 active registrations.	1: Open the event page. 2: Check the displayed seats-available figure.	Capacity: 100; Active registrations: 15	Displayed available seats reads exactly 85.	Automated test passes: 'FR-010a / UT_02'.	Pass
IT_01	Participant Export	Verify the exported CSV participant list matches the on-screen registrant list.	Organizer owns an event with multiple registrants.	1: Open 'View Registrants'. 2: Click 'Export CSV'. 3: Open the downloaded file.	Event: Tech Fest; Registrants: 15	CSV contains all 15 registrants with fields matching the on-screen list exactly.	Automated test passes: 'FR-010a / IT_01' (includes the formula-injection and IDOR regression tests added for this export path).	Pass
IT_02	Participant Export	Verify the exported PDF participant list matches the on-screen registrant list.	Organizer owns an event with multiple registrants.	1: Open 'View Registrants'. 2: Click 'Export PDF'. 3: Open the downloaded file.	Event: Tech Fest; Registrants: 15	PDF contains all 15 registrants with fields matching the on-screen list exactly.	Automated test passes: 'FR-010a / IT_02' (includes the Latin-1/accented-name encoding regression test).	Pass
ST_01	Platform Statistics	Verify the admin statistics page shows correct totals for events, users, and registrations.	Admin is logged in; database has known counts of events/users/registrations.	1: Admin opens the Platform Statistics page.	Known totals: 50 events, 300 users, 900 registrations	Displayed totals exactly match the known database counts.	FAIL — not implemented on current main. No statistics page or API route exists in app/ or app/api/ (grep for 'stat' returns nothing). FR-010b (admin platform-wide statistics, PR #50) is still open and unmerged.	Fail
ST_02	Organizer Reporting	Verify an organizer can view accurate event-wise registration info across multiple events.	Organizer owns 3 events with differing registration counts.	1: Open 'My Events'. 2: View registration info for each of the 3 events.	3 events with 5, 10, and 20 registrants respectively	Each event shows its correct, distinct registration count with no cross-event data mixing.	Automated test passes: 'FR-010a / ST_02: Verify an organizer can view accurate event-wise registration info across multiple events'.	Pass

Execution summary (2026-11-04, against origin/main): 60 test cases — 48 Pass, 11 Fail, 1 Not Executed. FR-007 through FR-010a (minus FR-010/ST_01) are backed by the automated suite in tests/*.test.ts, run with NODE_ENV=test against a real PostgreSQL instance (97/97 tests passing). FR-001, FR-002, and the remaining FR-003/FR-004/FR-005/FR-006/FR-010 cases were verified by direct source-code / route inspection against origin/main rather than a live UI run; failures are tied to concrete, cited causes (missing endpoint, reverted PR, or a field that doesn't exist in the schema), not guesses. Executed by Amogh Herle, Arjun, and Shravani.
